The LYNX Forum kicks off collaboration efforts to accelerate the transition to new energy vehicles in Egypt

LYNX Strategic Business Advisors, the United States Agency for International Development's Business Egypt project (BE), implemented by DAI, USAID's Trade Reform and Development in Egypt (TRADE) Project, and UBER announced their collaboration to support the Egyptian government's efforts to enhance the roll-out of electric vehicles in Egypt and attract new investments to the sector. This collaboration will be launched during the next session of the LYNX Forum, co-organized by LYNX, Uber, USAID's BE and TRADE projects on developing a *Roadmap to Accelerate the Transition to New Energy Vehicles (NEVs) in Egypt*.

On October 15, 2023, the LYNX Forum will bring together senior government decision-makers, private sector industry players, development partners, and international experts to review current Egyptian policies as well as global best practices to incentivize demand for NEVs and e-mobility in Egypt. Discussions will also seek to assess infrastructure needs for NEVs and means of deepening the localization of the NEV industry in Egypt. And following a series of discussions, the three firms will submit to Egypt's Supreme Automotive Industrial Council a proposed roadmap to accelerate the transition to NEVs in Egypt.

The Egyptian government's adoption of an Automotive Industrial Development Program is an important step in advancing the country's ambition to become a manufacturing hub for environmentally friendly vehicles. The government's determination to accelerate green transformation efforts and create a sustainable transportation system will further boost ongoing efforts to achieve sustained economic growth. LYNX, USAID and UBER are strongly committed to supporting Egypt in achieving its 2030 vision for sustainable development.
