Methodology and quality

Foreign Direct Investment (FDI):

It is an investment that reflects a long-term relationship and a permanent interest of economic entities residing in an economy other than the Saudi economy. This means that an individual foreign investor or a group of foreign investors owns 10% or more of the voting power of shareholder rights, which entitles them to exercise a type of control or influence over the decision-making process in a way that serves their interests. Thus, this process is described as direct foreign investment.

Foreign Direct Investment Inflows:

They involve financial transactions between a foreign direct investment entity, direct investors, and related companies outside the Saudi economy. These transactions take place over a specific timeframe. Inflows are characterized by their positive effect, manifesting as an increase in equity rights and/or debt instruments.

Foreign Direct Investment Outflows:

They involve financial transactions between a foreign direct investment entity, direct investors, and related companies outside the Saudi economy. These transactions take place over a specific timeframe. Outflows are characterized by their impact on reducing liability aspects, such as through the payment of dividends, payment of loans, settlement of creditor dues, or when a direct foreign investor exists.

Net Inflow of Foreign Direct Investment:

It represents the difference between the inflow and outflow of Foreign Direct Investment into the country. [Methodology and quality, table](#)
